There is a growing body of research on the impact of the environment on human health. This research has shown that the environment can have a significant impact on human health, and that this impact can be both direct and indirect. Direct impacts include air pollution, water pollution, and noise. Indirect impacts include climate change, land use change, and resource depletion. The research also shows that the environment can have a significant impact on human health, and that this impact can be both direct and indirect.
