FUNCTIONALITY

- Figure 1** Schematic diagram of the study design. The study was a randomized controlled trial comparing the effect of a 12-week intervention on the quality of life of patients with a recent diagnosis of type 2 diabetes. The intervention group received a 12-week intervention, while the control group received standard care. The primary outcome was the change in quality of life, measured using the SF-36v2 questionnaire. The secondary outcome was the change in HbA1c levels. The study was conducted in a primary care setting in the United Kingdom.

iii. Overall perception of functioning of the government:

Overall perception of the functioning of the govt. is good. People are satisfied with direct benefit transfer (DBT) for various schemes launched by govt.

iv. Overall assessment of visit and suggestions:

The visiting officer to ensure that the overall assessment is recorded in this along with concrete suggestions.

The visit was good. There is need of improvement in various sectors like electricity, water supply, social welfare schemes and implementation of various schemes launched by govt. Awareness camps should be organised.

Signature of the visiting officer

Name: Mohd. Nazam
