1. *Chlorophyll a* (Chl a) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl a is essential for the light-dependent reactions of photosynthesis, where it converts light energy into chemical energy in the form of ATP and NADPH.

V Any major complaint brought to notice:

Most of the time the area remains cut off from the rest by the valley, people have to walk on foot and during bad weather, face lot of problems. So a passenger shed at Patal Khan Gali by created would make the journey easy and comfortable.

VI Overall assessment of visit (Public Services): Please mention best practices, if any, observed

My visit to the area was satisfying. People of the area co-operated. Besides this front line workers made the visit all the more comfortable and easy.

VII Overall assessment of visit (Panchayat Functioning):

Panchayat is functioning fully and carrying out its responsibilities actively against all odds.
